Supporting Statement for Dr. Peter Knaggs

My last position, as a Teaching Fellow in Computing, was intended to provide support while the single honours computing course was run down. Now that this course has closed, my fixed-term contract has come to an end.

My main interest has been to bring the benefits of software engineering to the area of embedded systems and real-time control. Experience has shown this can only be achieved by integrating the techniques of software engineering into the embedded system developers working environment, by stealth if necessary. To this end, my research has revolved around stack based architectures and virtual machines. My intention is to provide a fully polymorphic object orientated development environment for type-free stack architectures. Unfortunately, I have not been able to find funding for this area/project.

Except for the draft *Forth 200x Standard* document all of my recent publications have been directed to providing support for my students. Over the years, I have experimented with different methods of supporting my students, including the publication of lecture notes, workbooks and podcasts.

During my academic career, I have taught a number of modules, including:

Topic	*Technologies*
Data Structures	Java
Information Systems	Oracle
Internet System Development	PHP, JavaScript, AJAX, MySQL
Compilers and Interpreters	C, Java, Flex/Bison
Enterprise Computing	Java, J2EE, EJB
Systems Architecture	68000, ARM, Circuit Design, Data Formats
Operating Systems	Unix, Perl, script
Systems Programming	POSIX, C C++
Requirements Engineering	
Systems Analysis and Design	SSADM, Prince-2
Formal Specification	Z, VDM, VDM++
Software Engineering	

I have played a significant role in course design, particularly the B.Sc. Computing and B.Sc. Software Engineering Management courses at Bournemouth University.

In addition, I have undertaken a number of administrative roles, including:

- Web site administrator (apache);
- The commissioning, instillation, management and administration of unix systems lab (Centos and Solaris);
- Project coordinator (both honours year and group);
- Year leader (honours year);
- Course leader (masters);
- Library representative;
- Member of the special needs advisory group.

The *Forth 200x Standard* project (`www.forth200x.org`) was launched in 2004. Due to my involvement with the ANS Forth standard document, contributing to the original document and becoming a member of the X3J14 review committee, I was elected editor and joint convener for the project. It is our intention to submit a document for consideration at the next review of the standard.

On a more personal note, I have an active interest in traditions. This started with an interest in traditional song, which naturally led on to traditional music, dance and ale. I have worked in a support role at various festivals for over 30 years. This currently includes:

- Head steward at the Credition festival;
- Deputy manager of the taskforce at the Chippenham festival;
- Assistant director responsible for the campsite at Warwick festival;
- A director of the (Verwood) Wail.

I was a founding partner in the *Ceol Mor Productions* record label. After producing the first disc, which was well received, a significant disagreement between the partners led to the label being dissolved.
